

HS

6300 II/8000 II

Next-Generation High-speed Horizontal Machining Center

HYUNDAI WIA Horizontal Machining Center

Technical Leader

Horizontal Machining Center HS6300/8000 II, designed by Hyundai WIA with years of expertise and the latest technology, provides high speed, high performance and maximum productivity.

		HS6300 II	HS8000 II
Pallet Size (L×W)	mm(in)	2-630×630 (24.8"×24.8")	2-800×800 (31.5"×31.5")

Rapid Traverse Rate (X/Y/Z)	m/min(ipm)	60/60/60 (2,362/2,362/2,362)	50/50/50 (1,969/1,969/1,969)

[] : Option

HS

6300 II/8000 II

Next Generation High Efficiency Machining Center

- High Rigidity Box-type Structure
- A symmetrical structure design with the center of gravity of Z-axis and transfer axis matching
- Easy chip disposal with direct chip discharging structure
- Best-in-class rapid traverse rate of 60m/min (2,362ipm)
- Machining of the largest workpiece in its class
- ATC design capable of attaching the largest tools in its class

01 BASIC STRUCTURE

High Quality & Productivity Horizontal Machining Center

ATC & Magazine

- No. of Tools : 40 [60/90/120/150] EA (MATRIX : 240 EA)
- Tool Selection Method : Fixed

High Precision Spindle

- Built-in Spindle : 10,000 r/min
- Oil Cooling System
- BBT50 [HSK-A100]

Pallet

- Pallet Size (X/Y)
HS6300 II : 630×630 mm (24.8"×24.8")
HS8000 II : 800×800 mm (31.5"×31.5")
- Air Clearing System

15" Large Monitor Applied

The HS6300/8000 II has a 15" large monitor for enhanced visibility. In particular, we can create more convenient use conditions by improving the operating environment such as program setup and simulation through a large screen.

HIGH RIGIDITY BOX-TYPE STRUCTURE

① Highly Rigid Box-type Bed

Unlike the previous reverse T-shaped structures, HS6300/8000 II has a horizontally symmetrical design with the Z-axis transfer system at the center of the material. In particular, a boxed bed design with extremely high rigidity not only secured the structural stability but also improved vibration absorption, enabling ample medium cutting and excellent illumination for machining with a symmetrical structure on the Z-axis.

② Changed Chip Disposal Structure

Designed to directly drop chips onto the chip conveyor, HS6300/8000 II enables seamless chip disposal even during mass chip generation. (Chip processing capability has been greatly improved compared to the screw-type chip conveyor in existing machines.)

③ Step Type Bed Structure

It is designed to minimize the load occurring at the front. Also, travel stability is increased by column weight optimization.

<Reversed 'T' Type Bed>

<HS6300 II 'Box' Type Bed>

02 HIGH-SPEED FEED

Highest Quality, High-speed Horizontal Machining Center

High-Speed Roller Type Guideway

Linear roller guideways are applied to reduce non-cutting time and bring high rigidity. Each axis is directly connected to a highly reliable digital servo motor to provide high rigidity and minimal thermal displacement.

Large Ball Screw

The increased diameters of all ball screws allow for high accuracy even during heavy duty machining.

Linear Scale OPTION

Linear scales on all axis providing high precision positioning accuracy and compensates for ball screw thermal displacement ensuring extremely precise machining.

In addition, the absolute type linear scale is installed in close proximity to the ball screw of each axis.

Travel (X/Y/Z) HS6300 II

(1,968/1,968/1,968 ipm)

03 HIGH PRECISION SPINDLE

Excellent machining performance with high-precision spindle

The secret to maintaining high quality even during a long-term machining, starts with the performance of the spindle.

HS6300/8000 II incorporated a high performance built-in spindle as a standard.

The built-in spindle, with the spindle and motor combined, exhibits superior performance during high speed rotations, minimizing vibration.

In addition, HS6300/8000 II will realize the best-in-class acceleration and deceleration time of the spindle, contributing to improved productivity. By improving the acceleration performance of the spindle motor compared to competition models, it has shortened the time to reach the RPM necessary for machining, and the tool exchange time has been greatly improved by minimizing the spindle motor down time

◎ Spindle Acceleration (0 → 10,000 rpm)

Previous model	7 sec
HS6300 II	3.4 sec 3.6 sec reduction

High performance spindle of HS6300/8000 II, developed in consideration of even high quality performance and productivity, This is the main feature of HS6300/8000 II.

HIGH-SPEED, HIGH-POWER BUILT-IN SPINDLE

SPINDLE

Built-in Spindle

By using ultra precision class angular ball bearings, fast acc/deceleration of the main spindle is achieved. The spindle head is designed to minimize heat displacement therefore reducing heat generation and making it possible to maintain high accuracy.

Oil Cooling System.

Spindle temperature is controlled by the use of a spindle oil chiller. This ensures consistent spindle temperature which minimizes thermal displacement.

Through Spindle Coolant (20/30/70 bar) **OPTION**

Through Spindle Coolant is exceedingly useful when drilling deep holes. It helps increase the lifetime of the tool, while decreasing cycle time.

Dual contact Spindle

The Big Plus spindle system (BBT#50) provides dual contact between the spindle face and the flange face of the tool holder.

Spindle Specifications

[] : Option

Speed (rpm)	Motor (Max./Cont.)	Torque (Max./Cont.)	Type
10,000 rpm	45/25 kW (60/33.5 HP)	623/305 N·m (459.5/225 lbf-ft)	Built-in
[15,000 rpm]	[37/30 kW (50/40 HP)]	[398/191 N·m (293.6/140.9 lbf-ft)]	
[6,000 rpm]	[55/30 kW (74/40 HP)]	[807/353 N·m (595.2/260.4 lbf-ft)]	

HSK Tool Holder **OPTION**

HSK tool holder is utilized for precise positioning with less expansion in the spindle taper during high speed rotation. This ensures an excellent level of precision for high precision machining.

04 APC & PALLET

Productivity improvement through servo motor drive type APC

APC & Pallet Specifications

Model	Pallet Size	Max. Load Capacity	Min. Indexing Angle	APC Type
HS6300 II	2 - 630×630 mm (24.8"×24.8")	2 - 1,500 kg (3,307 lb)	1° [0.001°]	Direct Turn
HS8000 II	2 - 800×800 mm (31.5"×31.5")	2 - 2,000 kg (4,409 lb)	1° [0.001°]	

HIGH RIGIDITY & HIGH SPEED PALLET EXCHANGE SYSTEM

APC

High Speed APC

HS6300/8000 II provides a lift rotary type APC(automatic pallet changer) as standard. The loading station pallet can be rotated and locked in 90° increments for convenient loading/unloading of workpieces.

APC Change Time	12 sec (Vacant)
Previous Machine	16 sec
HS6300 II	12 sec 4 sec reduction

PALLET

High Precision Pallet

Inside the cones, there are clamping devices for powerful clamping of pallets which is suitable for heavy duty cutting. 1° (0.001° Opt.) index table is applied with high precision curvic coupling for accurate indexing.

Air Clearing System

During the pallet change cycle, strong air blasts from the taper cones on the machine table help remove chips and provide clean surfaces for locating the pallet. This ensures high accuracy of pallet positioning and guarantees optimum rigidity.

06 AUTOMATION SYSTEM

Automatic Solutions to Improve Productivity

High level of automation system with multi-level pallet rack

Hyundai WIA PLS is an unmanned automation system for horizontal machining centers with two-storied pallet stackers to achieve a reasonable installation area. Especially, it contributes to productivity improvement by easy and efficient system operation to flexibly respond to changes in production volume.

Technical drawing of a 150 mm diameter, 1.5 BBT50, BIG PLUS nozzle. The drawing includes a side view, a top view, and a detail of the nozzle tip. Dimensions are given in inches and millimeters. Key features include a 60-degree nozzle angle, an M24 thread, and a 7/24 taper. The side view shows a total length of 101.8 inches (4' 0.39'') and a nozzle diameter of 150 mm (Ø3.93''). The top view shows a diameter of 35.4 inches (1.39'') and a distance of 25.7 inches (1.01'') from the center to the nozzle tip. The detail view shows a nozzle tip diameter of 6 mm (Ø0.23'').

Absolute / Incremental program	G90 / G91
Program stop / end	M00, M01 / M02, M30
Maximum command unit	± 999,999.999 mm (± 99,999.9999 inch)
Plane selection	X-Y : G17 / Z-X : G18 / Y-Z : G19
Workpiece coordinate system	G52, G53, 48 pairs (G54.1 P1 ~ P48)
Manual absolute	Fixed ON
Programmable data input	G10
Sub program call	10 folds nested
Custom macro	#100~#199, #500~#599, #98000~#98499
Programmable mirror image	G51.1, G50.1

Controlled axis / Display / Accuracy Compensation	
Polar coordinate command	G15, G16
Do not look ahead function	G4.1
Including Chamfering / Corner R	
Canned cycle	G73, G74, G76, G80 ~ G89
Coordinate rotation	G68, G69
Scaling	G50, G51
Auxiliary function / Spindle speed function	
Auxiliary function	M 4 digit
Level-up M Code	Multi / By-Pass
Spindle speed command	S 5 digit , Binary output
Spindle override	50% ~ 120% (10% Unit)
Spindle orientation	M19
FSSB high speed rigid tapping	
Tool function / Tool compensation	
Tool function	Max. T 8 digit
Tool life management	256 pairs ☆
Tool offset pairs	400 pairs
Tool nose radius compensation	G40, G41, G42
Tool nose length compensation	G43, G44, G49
Tool offset memory C	Tool length, diameter, abrasion (Length/Dia.)
Tool length measurement	Z axis Input C
Editing function	
Part program storage size	10240m (4MB)
No. of registerable programs	1,000 ea
Program protect	
Background editing	
Extended part program editing	
Memory card program edit	Copy, move and change of PLC program
Protection of data at 8 levels	
Data input / output & Interface	
I/O interface	Memory card, USB memory interface Embedded Ethernet interface
Screen hard copy	
External message	
External key input	
External workpiece number search	
Automatic data backup	
Setting, display and diagnosis	
Self-diagnosis function	
History display	Alarm & Operator message & Operation
Run hour / Parts count display	
Maintenance information	
Actual cutting feedrate display	
Display of spindle speed / T code	
Graphic display	
Operating monitor screen	
Power consumption monitoring	Spindle & Servo
Multi language display	Support 25 languages
Display language switching	Selection of 5 optional Languages
LCD Screen Saver	Screen saver
Macro Excutor	Custom software 8MB (WIA Screen)☆
Processing select	Speed/rigidity setting

Option	
Fast ethernet	Needed option board
Data server	Needed option board (1GB, 2G, 4GB)
Sub Spindle control	☆
Polar coordinate interpolation	G12.1, G13.1
Cylindrical interpolation	G07.1
Manual handle feed	2/3 units
Tool offset number	Max. 2,000 pair
Program storage capacity	~ 8 MByte
Program registration number	Max. 4,000 ea
Additional work coordinate	300 pair (G54.1 P1 ~ P300)

Figures in inch are converted from metric values.
The FANUC controller specifications are subject to change based on the policy of company CNC supplying.
