KBN 1300C

The Next Generation Boring Machine

- One-piece bed construction for ultra precision
- X-axis 4,000mm (157.5") as an option
- Gear Box driven spindle for heavy duty cutting
- Optimal boring machining with W-axis travel of 700mm (27.6")
- Standard linear scale and rotary scale for ultra precision

01 BASIC FEATURES

The Most Advanced Mechanism, Revolutionized Productivity & High Performance

ATC & Magazine

- Tool Shank : BT50 [DIN50, CAT50, BBT50]
- No. of Tools : 60 [Opt. 90] EA

High Precision Spindle

- 2 Step Gear Spindle (2,500 r/min)
- W-axis 700 mm (27.6")

NC Rotary Table

- Table Size : 2,000 × 1,800 mm
(78.74" × 70.86")
- Max. Load Capacity : 15,000 kg (33,069 lb)

INCREASED RIGIDITY, OPTIMUM MACHINING CAPABILITY

HIGH RIGIDITY STRUCTURE

Stable Mechanical Structure

The X-bed, Z-bed, and column are designed with a high-rigidity casting structure to secure a high-rigidity and stable mechanical structure, and the guideway is ground precisely after heat treatment to ensure high stiffness and high precision.

GUIDE WAY

Hydraulic balance structure of the Y-axis

The hydraulic balance structure features an accumulator charged with high-pressure nitrogen gas, thereby guaranteeing smooth operation and high precision of the Y-axis.

In addition, noise has been eliminated and energy can be saved as the machine is not equipped with a hydraulic pump.

Hand Scrapping

The counter surface was hand scraped with Turcite attached, and a linear scale was installed as standard to ensure high precision, realizing the optimal conditions for improving processing quality.

HIGH PRECISION

Std Linear & 1 sec Rotary Scales on All Axis

Linear scales on X/Y/Z-axis and rotary scale on B-axis provide High accuracy positioning and enabling precise machining.

HEAVY DUTY CUTTING, GEAR TYPE SPINDLE

SPINDLE

High-rigidity Spindle with Excellent Machining Capability

Cutting work can be carried out in conditions of perfect stability as access to the workpiece has been facilitated with the adoption of a nose-type head structure, and the protrusion distance of the boring spindle has been minimized. High-rigidity bearings have been applied to the milling spindle to support the spindle unit.

The milling spindle is designed and manufactured to withstand large loads during axial direction machining.

Also, the spindle is equipped with a large-capacity cooling device to maintain stable thermal displacement even during long-term operation, and that cools the gearbox (ZF reducer) and spindle cartridge.

Stable W-axis drive

The boring spindle is applied a W-axis ball screw and 2-way LM guide method. It is driven by a servo motor and a reduction pulley, and equipped with a high-precision encoder to guarantee the degree of feedback.

HIGH CAPACITY SPINDLE COOLING DEVICE

Standard feature high capacity spindle cooling device(5,590kcal/h) enables stabilized spindle temperature during long operations. Stabilized spindle environment leads to high performance and high quality machining.

03 MAGAZINE & TABLE

HIGH RIGIDITY, TOOL CHANGE SYSTEM

ATC & MAGAZINE

Reliable Automatic Tool Changer (ATC)

The tool changer consists of a tool magazine and carriage driven by a servo motor to increase reliability.

The adoption of a hydraulic cylindrical structure allows it to function stably even when using heavy tools.

TABLE

NC Rotary Table

To ensure smooth operation of the rotary table under heavy loads, the center shaft is equipped with double roller bearings and thrust ball bearings.

Also, the rotary table features a thrust roller bearing structure and a strong bi-directional clamping structure that ensure stable processing conditions.

High Precision HEIDENHAIN 1sec Encoder

Hyd. Pad

HIGH RIGIDITY GEAR DRIVING TABLE

B-Axis Double Pinion Gear

The drive of the table has a structure in which a gear box and double pinion rotate a large high-precision ring gear. High-precision encoder is installed at the center of the table as a standard feature, allowing precise control of the index.

04 USER CONVENIENCE

Various Devices for User Friendly

CHIP DISPOSAL SOLUTION & COOLANT UNIT

Spindle Nozzle & Cutting Air Blow

Gun Coolant

Air Gun

Interior Screw Chip Conveyor

Dual screw type chip conveyors are located at each side of the bed which makes it convenient to remove chips.

Chip Conveyor

Timely and effective disposal of chips will improve productivity as well as working environment.

Through Spindle Coolant

Through spindle coolant is particularly useful for deep hole drilling and helps increase tool life and decrease cycle time.

Hinge	Chip Type : Roughing chip, long chip, chip complex	Material : SS41, 45C, Cast Steel	Left Direction
	Highly efficient when disposing a lot of chips. Capable of handling stringy chips..		
Scraper	Chip Type : Finely broken chip blown out	Material : cast Iron, Nonferrous	
	Convenient for shortly cut chips.		

Fire Safety

The use of a water-insoluble coolant or failure to use a coolant while machining inflammables may result in a fire.
Unauthorized modification of the machine may also result in a risk of fire.
Make sure to read and comply with the safety instructions before using the machine.

SPECIAL HEAD

Angle Head (Manual)

Angle head comes with rotary body, which enables machining items that are set perpendicular to the spindle.

It is connected to arbors that transfer the torque generated from the main spindle motors.

Facing Head (Manual)

A facing head is attached to the cross section of the spindle for various types of operations; outer facing, inner facing, cylindrical and conical boring and threading etc. It shows excellent performance in machining parts such as flange faces of large valves.
